

Mathematical Foundations and Algorithms for the Quasicontinuum Method

M. Luskin

School of Mathematics, University of Minnesota, Minneapolis, `luskin@umn.edu`

We will give an overview of the current state of numerical analysis and algorithms for the quasicontinuum method. We will present results for atomistic-to-continuum coupling error, rates of convergence for iterative solution methods, a posteriori error estimation, and adaptive algorithms for atomistic-continuum modeling and continuum coarsening.
